Mohamed Medhat Abdelfattah

Software Engineer

mohamedmedhat.dev2232@gmail.com +201110912198 Portfolio LinkedIn GitHub

Summary

Junior Frontend Engineer with hands-on experience building responsive web applications using React and Next.js. Comfortable working with APIs, improving UI performance, and applying modern frontend best practices. Motivated to learn, write clean code, and contribute to user-focused products in collaborative teams.

Education

B.S. in Computer Science, Cairo University 09/2020 – 07/2024
Graduation Project: Bookstore Platform (A+)
- Developed hybrid recommendation engine improving book discovery by 80%

Experience

Huawei, Software Automation Engineer (On-site) 02/2025 – Present
- Automated 30+ hours/month of manual tasks using Python, reducing errors by 60%
- Built Node.js REST APIs for internal tools, cutting response times by 30%
- Implemented Selenium/Pytest UI automation, accelerating testing by 40%
- Optimized SQL queries, improving API throughput by 35%

Skypoint , Front-End Engineer (Freelance) 07/2023 – 11/2024
- Developed and maintained a production-grade frontend using React and modern hooks, following a component- driven architecture
- Integrated APIs using React Query (useQuery) for efficient data fetching, caching, and synchronization, reducing redundant API calls by ~35%
- Built and integrated secure payment flows using Stripe, enabling reliable checkout and transaction handling
- Applied performance optimizations using useMemo and useCallback to minimize unnecessary re-renders, improving UI responsiveness by ~25%
- Optimized images, implemented code-splitting, and lazy loading, improving Google Lighthouse Performance and SEO scores by 30%+
- Improved application load speed by ~20% through bundle optimization and asset compression
- Enhanced UX through iterative UI improvements and responsive design, increasing user satisfaction by ~25%
- Collaborated with backend engineers and stakeholders to translate business requirements into scalable frontend features

Route IT Training Center, Back-End Developer (Diploma) 08/2023 – 12/2023
- Built Node.js/MongoDB e-commerce platform with Stripe integration, handling 100+ concurrent users

Projects

Cabin Booking App, (Next.js, Supabase, React Query)
- Reduced API latency by 30% via optimized Supabase queries
- Implemented JWT auth achieving 100% secure access control

Online Bookstore, (React, Node.js, MongoDB)
- Developed RESTful APIs using Node.js and Express for core functionalities like product management, user authentication, and order processing.
- Integrated Stripe for secure payment processing, enabling customers to complete transactions using various payment methods
- Built the customer-facing storefront using React and TailwindCSS, allowing users to browse products, add items to the cart, and complete the checkout process.
- Delivered 99% uptime through optimized MongoDB indexing

Chat-app
- A real-time chat platform with React, Node.js, and Socket.io , featuring chat rooms and instant messaging.
- Includes typing indicators and a responsive design for seamless user experience across devices.

Technical Skills

Frontend: React, Next.js, Vue.js, TypeScript, Redux

Backend: Node.js, REST APIs, MongoDB, SQL

Automation: Python, Selenium, Pytest

DevOps: Docker, Git, CI/CD

Languages: English (B2), Arabic (Native)

Certifications

- The Ultimate React Course
  (Jonas Schmedtmann)
